

NFWF

Gulf Environmental Benefit Fund

RECIPIENTS

Florida Fish and Wildlife Conservation Commission

NOAA

Various Stranding Network Participating Organizations

AWARD AMOUNT

\$4,400,000

LEVERAGE AMOUNT

\$1,973,000

LOCATION

Gulf Coast of Florida

AWARD DATE

November 2015

PROGRESS UPDATE

Florida Marine Mammal Stranding Network participants continue to respond to reported stranding events and record samplings. Data is being audited by the Data Diplomat and incorporated into NOAA database. (August 2017)

FLORIDA

Increased Capacity for Marine Mammal Response

This project will improve capacity and data collection efforts for the Florida Fish and Wildlife Conservation Commission’s marine mammal field stations as well as 8 marine mammal stranding response and research organizations working in the Gulf. The Gulf of Mexico is habitat for 22 species of marine mammals – many were directly impacted by the oil spill, all are listed under the Marine Mammal Protection Act and several are listed as endangered under the Endangered Species Act. Given the high occurrence of annual marine mammal strandings along Florida’s Gulf Coast – more than 2,000 over the past five years – it is a management priority to enhance and sustain a viable stranding network in order to increase survival of distressed animals, monitor emerging diseases and mortality trends, improve understanding of population threats from future stranding events, and trigger management intervention where appropriate.

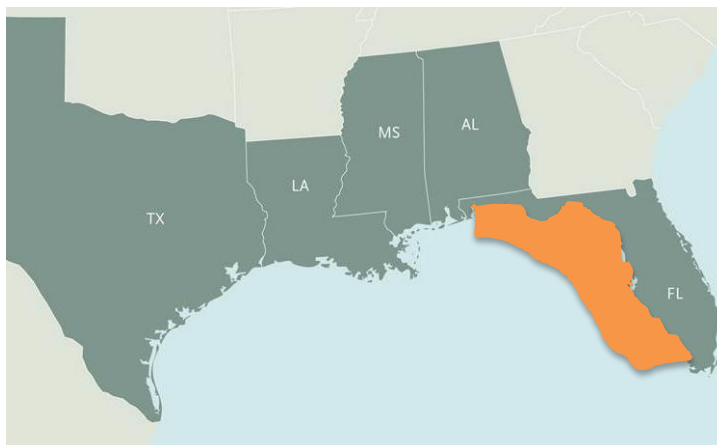

This project will provide supplemental equipment and staff capacity to capture and provide first response-care for distressed animals, recover carcasses, conduct thorough necropsy examinations to make cause of death determinations and efficiently transmit data to appropriate management agencies. Additionally, funds will be utilized to enhance data collection for Gulf-wide stranding events and related initiatives, and improve training for stranding network participating organizations to improve response efficiency, capability and coordination.
