

NFWF

Gulf Environmental Benefit Fund

RECIPIENT

Mississippi Department of Environmental Quality

AMOUNT

\$4,582,500

PARTNERS

Mississippi Department of Marine Resources

University of Southern Mississippi

LOCATION

Coastal waters of Mississippi

AWARD DATE

November 2014

STATUS

Active

PROGRESS UPDATE

Fisheries and water quality sampling, processing and analysis efforts are ongoing. Collected data was incorporated into the 2016 and 2017 annual reports (February 2019)

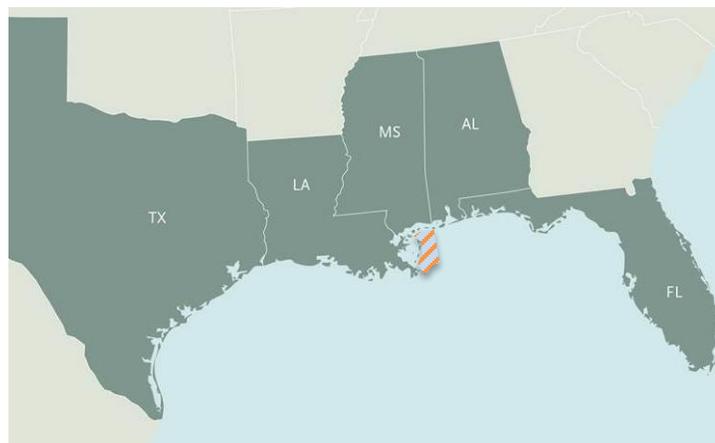

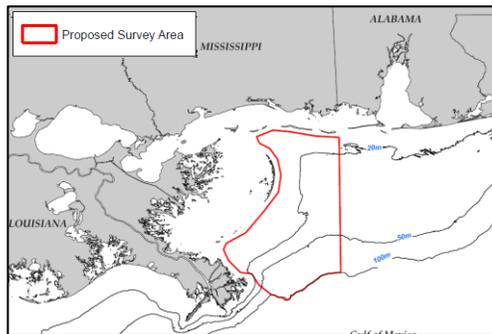

The Gulf Environmental Benefit Fund, administered by the National Fish and Wildlife Foundation (NFWF), supports projects to remedy harm and eliminate or reduce the risk of harm to Gulf Coast natural resources affected by the 2010 Deepwater Horizon oil spill. To learn more about NFWF, go to www.nfwf.org.

MISSISSIPPI

Reef Fish Assessment for Mississippi Coastal and Nearshore Gulf Waters

This study is a two-year effort that will implement a significant and meaningful expansion of the collection of data on both catch effort and stock assessment of reef fish species in coastal Mississippi. These data will be used to improve ecosystem-based management capabilities and improve and expand single-species stock assessments for managed fish species. The project includes the implementation of both fisheries-dependent and fisheries-independent data collection. This project is similar to and complimentary of fisheries monitoring projects being supported by the Gulf Environmental Benefit Fund in Florida and Alabama.

Gulf of Mexico fisheries, particularly red snapper, have historically been subject to overfishing, causing periods of significant decline in stocks. While current stock assessments show an improving fishery, more work clearly remains to be done. The largest single impediment to effective management of Gulf of Mexico reef fisheries like red snapper is the lack of sound data related to both catch effort and population levels. Establishment and expansion of monitoring and assessment programs is critical to managing and monitoring the recovery of fisheries and ecosystems.

This project expands reef fish monitoring in Mississippi to improve data collection and inform fisheries management.
