ALABAMA

Bon Secour- Oyster Bay Wetland Acquisition Project

This acquisition project will protect and restore approximately 836 acres of diverse coastal habitat in the City of Gulf Shores. The tidal marshes, maritime forests, and freshwater swamps located in this project area are important habitat for many species of conservation significance including threatened and endangered species such as the Alabama red-bellied turtle and the eastern indigo snake, and various wading birds. The tidal wetlands and swamps serve as a nursery for commercially important shellfish and finfish and play a crucial role in the water quality and ecological function of the Oyster Bay, Bon Secour and Little Lagoon watersheds. The properties will be protected in perpetuity for conservation purposes, and a comprehensive habitat management plan will be developed and implemented. Restoration and management actions will include fire management, invasive species removal, improving hydrologic connectivity, and native vegetation plantings.

These acquisitions will be occurring within the boundaries of the City of Gulf Shores, one of the fastest growing communities in south Alabama, and will eliminate the likely risk of future development. In addition, these acquisitions will expand existing preserved lands, including an adjacent unit of the Bon Secour National Wildlife Refuge and other city- and county-owned conservation lands.

The target parcels include important coastal marsh habitat, similar to the picture above, that will be protected in perpetuity and be open to the public for passive recreational use.

AT A GLANCE

RECIPIENTS:

City of Gulf Shores

AWARD AMOUNT:

\$12,511,400

PARTNERS:

Alabama Department of Conservation and Natural Resources

Weeks Bay Foundation

LOCATION:

Gulf Shores

AWARD DATE:

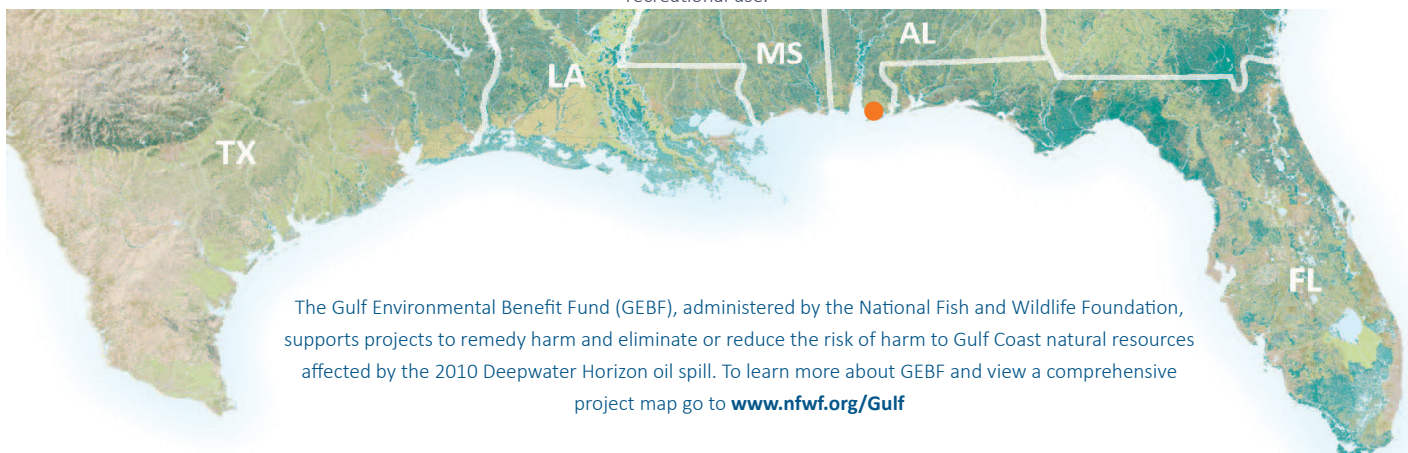

November 2016

STATUS:

Active

PROGRESS UPDATE:

Acquisition have been completed. The Habitat Management Plan is finalized and implementation is scheduled to begin in spring of 2020.

The Gulf Environmental Benefit Fund (GEBF), administered by the National Fish and Wildlife Foundation, supports projects to remedy harm and eliminate or reduce the risk of harm to Gulf Coast natural resources affected by the 2010 Deepwater Horizon oil spill.
