ALABAMA

Alabama Coastal Bird Stewardship Program

This project helped conserve priority shorebird and coastal waterbird populations by establishing a three-year bird stewardship, monitoring, and outreach program in coastal Alabama. The Alabama Coast's beaches and islands provide critical nesting, wintering, and migratory stopover habitat for many species of shorebirds and coastal waterbirds. These coastal bird populations continue to decline, and degradation and human disturbance of habitat remains the leading stressors to these populations. This project worked to improve the status of bird species of conservation concern through training of volunteers to steward and monitor targeted and other species and their habitat at key nesting sites in the state.

The expansion of stewardship activities is complimentary to similar efforts in Florida and Mississippi, currently funded by the Gulf Environmental Benefit Fund and the Natural Resources Damage Assessment program, and extends stewardship efforts for shorebirds and coastal seabirds to critical nesting habitat across the northern Gulf.

This project allows ADCNR and Birmingham Audubon to begin implementation of expanded and targeted stewardship activities in coastal Alabama to benefit shorebird and waterbird populations.

AT A GLANCE

RECIPIENTS:

Alabama Department of Conservation and Natural Resources

AWARD AMOUNT:

\$1,410,368

PARTNERS:

Alabama Audubon

Mobile Bay Audubon Society

LOCATION:

Coastal Alabama

AWARD DATE:

March 2016

STATUS:

Closed

PROGRESS UPDATE:

Project closed March 2021.

The Gulf Environmental Benefit Fund (GEBF), administered by the National Fish and Wildlife Foundation, supports projects to remedy harm and eliminate or reduce the risk of harm to Gulf Coast natural resources affected by the 2010 Deepwater Horizon oil spill.
