MISSISSIPPI Mississippi Coastal Preserves Program

This project restored and improved management of the State of Mississippi's system of Coastal Preserves to enhance the ecological value of these important coastal habitats. Restoration on 26 Coastal Preserve sites utilized invasive species control and native vegetation plantings to restore ecological function to these unique and important habitats.

The Coastal Preserves Program (CPP) was created in 1992 to identify, acquire, protect and manage Mississippi's coastal wetland habitats, recognizing that the abundance and productivity of Mississippi's coastal waters is a product of the quantity and quality of the coastal wetlands. Without treatment, invasive species can become dominant on CPP lands, leading to a complete habitat conversion and the irreversible loss of many of the native plant and animal species currently found there. The program targeted the most threating and destructive invasive species including Chinese tallow, giant salvinia, common salvinia and water hyacinth. By strategically restoring wetlands and removing invasive species, the Coastal Preserves Program project revitalized ecologically and economically important fish and wildlife habitat.

Work on lands within the Mississippi Coastal Preserves Program, pictured above, targets invasive species and improves habitat and water quality in these unique coastal habitats.

AT A GLANCE

RECIPIENT:

Mississippi Department of Environmental Quality

AWARD AMOUNT: \$1,874,985

PARTNERS:

Mississippi Department of Marine Resources

LOCATION:

Jackson, Harrison, and Hancock Counties, Mississippi

AWARD DATE: November 2013

STATUS: Closed

PROGRESS UPDATE: Project closed July 2023.

The Gulf Environmental Benefit Fund (GEBF), administered by the National Fish and Wildlife Foundation, supports projects to remedy harm and eliminate or reduce the risk of harm to Gulf Coast natural resources affected by the 2010 Deepwater Horizon oil spill.
