TEXAS

Carancahua Bay Habitat Preservation and Enhancement- Phase II

This project will complete engineering, design and construction of a 2 mile living shoreline to protect and restore the mouth of Carancahua Bay in Calhoun County. This investment will directly protect over 1,000 acres of salt marsh, oysters, seagrass, and shallow water habitat complex, as well as up to 75% of intertidal salt marsh within the Salt and Redfish Lake areas of the bay (624 acres). Further, this project will restore the natural salinity regime across the lower portion of Carancahua Bay, re-establishing the conditions that allow estuarine species and habitats to thrive.

The construction of protective living shoreline structures along the eastern portion of Salt Lake and along the eastern and southern portions of Redfish Lake will protect the marshes, oysters, and sea grass beds within the two lakes. It will also help to re-establish the natural salinity regimes within Carancahua Bay, which has been adversely affected by the erosion of the shorelines at the mouth of the Bay resulting in greater wave energy and higher salinity water intrusion from Matagorda Bay.

AT A GLANCE

RECIPIENT:
Texas General Land Office

AWARD AMOUNT:
\$6,100,000

PARTNERS:
U.S. Fish and Wildlife Service

LOCATION:
Calhoun County

AWARD DATE:
November 2020

STATUS:
Awarded
