

memorandum

Date May 27, 2020

To Amanda Bassow

From Lisa McDonald and Chris Dixon

Subject Development of Jobs Calculator

This technical memorandum outlines the steps that were taken to develop a Jobs Calculator (the “tool”) for the National Fish and Wildlife Foundation (NFWF). The objective of this tool is provide NFWF with a straight forward approach to estimate the number of jobs supported by grant outlays made by NFWF on an annual basis. Abt Associates developed the tool based on previous experience estimating economic impacts of infrastructure and environmental investments.

Evaluation of NFWF Expenditures and Expenditure Profiles

The first step in this workbook matches NFWF Grantee projects with Regional Economic System (RECONS) profiles previously developed by the US Army Corps of Engineers (USACE 2019). RECONS is a regional economic modeling tool designed to provide estimates of regional economic impacts associated with USACE projects, programs, and infrastructure development (USACE 2020). All RECONS work activity profiles are associated with at least one IMPLAN sector and, in some cases, include multiple sectors, depending on the complexity of the activity, allowing for the mapping of dollars spent to changes in jobs, labor income, sales, and total economic output (USACE 2019). There are several RECONS profiles that are comparable to the type of spending that NFWF is undertaking on most of the projects awarded in the Conservation Investments Program and the Hurricane Sandy Coastal Resiliency Competitive Grant Program (see Table 1 below). Only changes in direct, indirect, and induced jobs due to NFWF project spending were considered for this tool. RECONS was chosen as a basis for mapping of expenditures for the Jobs Calculator due to the fact that RECONS is a USACE certified model and uses an accepted methodology and the model evaluates economic impacts of projects and expenditures similar to those of NFWF grant programs.

Table 1: RECONS Activity Profiles Mapped to NFWF Projects

RECONS Activity Profile
Ecosystem and Habitat Restoration or Improvements, Non-Construction Activities
Feasibility Services and Studies
Construction Activities for Ecosystem and Habitat Restoration or Improvements
Construction or Major Rehabilitation of Earth Dams and Spillways
Scientific Research and Technical Studies and Services
Construction and Major Rehabilitation of Levees and Floodways
Construction of Fish Facilities at Dams
Staff Augmentation

This tool matches the individual NFWF Grantee projects from the years 2017, 2018 and 2019, provided in the "NFWF Grantee Budgets 2017-19.xls" workbook and Sandy Recovery specific projects in the "Sandy_Jobs Breakdown.xlsx" workbook to RECONS profiles described in Appendix A. Table B - 2 and Table B - 3 in Appendix B provide a list of each of the NFWF projects along with the RECONS profile that they were mapped to. RECONS spending profiles provided local purchase coefficients (LPCs) for each IMPLAN industry mapped to a profile. These LPCs were either left at their default, regional purchase coefficient (RPC), value in IMPLAN or customized in the RECONS model. The Jobs Calculator uses the same LPCs identified in the RECONS model for each IMPLAN industry with the exception of applying dollars to state or local government spending. In the instances where federal spending was changed to state and local government spending the LPC was changed from its default value of 75% to 100% to indicate that 100% of the dollars being allocated to state or local spending would be spent within the project's area of influence instead of leaking a portion of these dollars which would occur if the funds were spent by a federal entity. Tables in Appendix A show the application of LPCs by IMPLAN sector.

The column called "Organization Type" that is original to the "NFWF Grantee Budgets 2017-19.xls" workbook was used to group projects into either of the two "Org Classifications:" 1.) "Other" or 2.) "State or Local Govt." These two classifications were used to cross-reference each project into a modified RECONS profile¹ that accounts for spending at the state and local government level or other levels versus spending solely at the federal level which RECONS was originally developed for.

The Sandy Projects list includes projects between the years 2013 and 2016. However, Abt does not have a list of when dollar values attributable to these projects were spent. Therefore, we conservatively assume that all dollar values are in year 2016\$ and were spent in the year 2016 in order to show the minimum number of jobs supported by these projects. An average salary for the years 2017 through 2019 was applied to the personnel column for the Sandy Projects in order to estimate the number of direct jobs supported by personnel spending.

Note that approximately 5 percent of projects (by total budget) could not be mapped to RECONS profiles in years 2017 and 2019. This amount rises to 35 percent for the year 2018 primarily due to two major projects that acquire land or water rights. These dollars are not supporting as many jobs as in other years since more money is flowing to real estate acquisitions in this year. Most of this spending is attributable to the purchase of and would not support many, if any, jobs.

¹ Note that federal recipients of grant dollars are classified as "Other" projects in this schema in order to differentiate them from state and local grant projects. However, this may slightly overestimate the local job impacts of these dollars as the portion of local dollars being attributed to a local industry for these projects would actually be spent on federal workforce labor. This estimate is between 3 and 9 percent of project spending for these types of grants, depending on the RECONS profile selected for the project. Federal grants represent approximately 6 percent of all allocated grant dollars for projects between 2017 and 2019.

Economic Multipliers

Multipliers for the industry sectors that each RECONS profile was mapped to were obtained from an IMPLAN® (Impact Analysis for Planning)² model of the state of Louisiana in 2017 (IMPLAN 2017a). The total economic impacts of the project (direct, indirect, and induced) on local employment, labor income, and economic output³ were assessed using this tool. IMPLAN software and data are sophisticated economic tools that can be used to estimate the impacts of changes in regional economies. IMPLAN customizes regional input-output models to provide estimates of output (sales), employment, income, and gross regional product effects in a specified location. Changes in the purchases of goods and services for final consumption (final demand change) are the driving forces in input-output models. Each industry that produces goods and services generates demands for other goods and services. For example, when construction firms pay their workers and purchase supplies or services, economic activity is generated in the local or regional economy through salaries and business and household spending. Multipliers are used to describe this additional economic activity. As of 2017, the data year of the model used for this calculator, IMPLAN has the capability to analyze 536 industry sectors, providing a detailed examination of the economic effects on specific industries.

One million dollars (2019\$) in industry sales was run through each of the IMPLAN sectors used in the RECONS profiles that the NFWF projects were matched with in order to determine the number of direct, indirect and induced jobs supported by this spending. This provided each sectors' jobs multiplier. These jobs were then converted from IMPLAN jobs to full-time-equivalent (FTE) jobs using a conversion table ("Convert_IMPLAN536_Employment_to_FTE_and_Income_to_EC_2017 With Formulas.xlsx") provided by IMPLAN (IMPLAN 2017b). One regular FTE job is assumed to work 2,080 hours per year.

NFWF determined the number of FTE personnel supported by total project personnel spending by dividing total project personnel spending by the average annual salary and fringe benefits per FTE for the year in which the projects are funded. The Jobs Calculator removes this total project personnel spending from the total NFWF project budget in order to isolate the remaining amount of project spending that should be attributed to additional direct, indirect, and induced jobs. This amount was then adjusted to 2019 dollars, the dollar year that the IMPLAN jobs multiplier was calculated in, and divided by \$1,000,000 to determine the percentage of each sectors' jobs multiplier that would apply to project spending. This value was further broken out as a percentage of spending within each industry for the RECONS profile assigned to that project. This final step allows the calculator to account for the breakdown of jobs in each industry that is supported by project spending.

² The Impact analysis for PLANing (IMPLAN®) is an industry-standard input-output model used to estimate economic impacts. IMPLAN® Pro customizes regional input-output models to provide estimates of output (sales), employment, income, and gross regional product effects in a specified location.

³ Economic output is equivalent to sales or revenues. Output can be defined as total value of production, total value of purchases by intermediate and final consumers, or by intermediate outlays plus value added.

Inflation Adjustments

As there are multiple years of spending in the data sets under consideration in this Jobs Calculator it is important to consider the dollar year of spending associated with each project. The tool makes an adjustment to the dollar value of spending for each of these projects to match the dollar value in the year in which the IMPLAN multipliers are calculated. Furthermore, when combining multiple years of spending together to produce a combined result, such as this calculator, it is important to make sure that all dollar values are in the same dollar year prior to summing them and using them for additional calculations. The White House Office of Management and Budget's Historical Table 10.1 "Gross Domestic Product and Deflators Used in the Historical Tables: 1940-2025" was used to adjust dollar values for inflation over time (OMB 2020). Unless otherwise noted, dollar values in the Jobs Calculator should be considered to be in 2019 dollars. The input dollar value in the "Jobs Calculator" worksheet can be adjusted by adjusting the "Dollar Year" cell (C6) to the dollar year of the dollars you are inputting in the "Project Spending" cell (D6 or D8).

Estimation of Direct, Indirect and Induced Jobs

The "Summary (provided by NFWF)" worksheet provides the number of total, direct, indirect, and induced jobs supported by \$1.00 (2019\$) of total award or total award minus FTE personnel spending in cells K25:Q55. These values are then referenced by the "Jobs Calculator" worksheet. This "Jobs Calculator" worksheet is setup to be an easy-to-use calculator where NFWF can enter either the "Total Awarded Budget" (cell D6) or the "Total Awarded Budget Minus Personnel Spending" (cell D8) of one or many projects, select the dollar year of the budget (cell C6) and the "NFWF Spending Year/Profile to Use" (cell C10) and obtain the direct, indirect, induced, and total jobs (cells E6:H6 for "Total Awarded Budget" or cells E8:H8 for "Total Awarded Budget Minus Personnel Spending") supported by this spending. By default, the "NFWF Spending Year/Profile to Use" is set to "All Years Combined" (cell C10) which combines the supported jobs from all Grantee projects funded between 2017 and 2019. This value can be changed to a specific year or set to the "Sandy Projects". Note that the "Sandy Projects" are not included in the "All Years Combined" data and therefore do not contribute to the calculation of supported jobs if you select "All Years Combined."

The "Total Awarded Budget" (row 6) in the "Jobs Calculator" worksheet includes directly supported FTE Personnel Jobs NFWF already calculated in column L of the "Summary (provided by NFWF)" worksheet. The "Total Awarded Budget Minus Personnel Spending" (row 8) in the "Jobs Calculator" worksheet does not include these directly supported FTE Personnel jobs.

Note that an estimate of the number of induced jobs supported by the household spending of directly supported project personnel is provided in column M on the "Summary (provided by NFWF)" worksheet. However, these induced jobs are not included in the Jobs Calculator or in the columns to their right. If NFWF would like these jobs included in the calculator they can be easily added in the future.

Table B - 3: NFWF Sandy Projects Mapped to RECONS Profiles

Project No	Project Name	RECONS Profile No
41812	Preventing erosion and restoring hydrology in the Pine Barrens, New Jersey	2
42942	Increasing salt marsh acreage and resiliency for Blackwater National Wildlife Refuge, Maryland	1
42959	Rejuvenating Sunset Cove's salt marsh and upland habitat, New York	1
43006	Wetland restoration in Suffolk County, New York	1
43095	Reusing dredged material to restore salt marshes and protect communities, New Jersey	1
NPS-27	Dyke marsh restoration to promote resource protection from storm response and adaptation to sea level rise	1
USFWS-43	Restoring resiliency to the Great Marsh, Parker River National Wildlife Refuge, Massachusetts	1
USFWS-50	Increasing water management capability at Great Dismal Swamp National Wildlife Refuge to enhance its resiliency for wildlife and people	1
USFWS-85	Pocomoke Sound marsh enhancement, Ferry Point, Nanticoke River	2
44068	Restoring over one hundred wetland acres in Great Egg Harbor Bay, New Jersey	1
44109	Replenishing Little Egg Harbor's marshes and wetlands, New Jersey	1
USFWS-31	Fog Point living shoreline restoration, Martin National Wildlife Refuge	1
USFWS-57	Hail Cove living shoreline restoration, Eastern Neck National Wildlife Refuge	1
USFWS-76	Living shoreline-oyster reef restoration and construction at Chincoteague National Wildlife Refuge, Virginia	1
USFWS-77	Gandy's Beach Shoreline Protection Project, Downe Township, Cumberland County, New Jersey	1
41787	Restoring Bellamy River's fish passage and reducing flooding through removal of two fish barriers, New Hampshire	5
42874	Ausable watershed flood mitigation and fish passage restoration, New York	5
43378	Restoring fish runs and fragmented trout populations by removing a fish barrier, Connecticut	5
43834	Increasing community and ecological resiliency by removing a Patapsco River fish barrier, Maryland	5
44022	Reconnecting and restoring the Allegany Reservoir, New York	2
USFWS-9	Aquatic connectivity and flood resilience: West Britannia and Whittenton Dam Removals, Mill River, Taunton, Massachusetts	5
USFWS-11	Muddy Creek wetland restoration project, Chatham, Massachusetts	5
USFWS-21	Aquatic connectivity and flood resilience in Connecticut and Rhode Island: Removing the White Rock and Bradford dams, assessing the Potter Hill Dam fishway on the Pawcatuck River, and removing the Shady Lea Mill Dam in North Kingstown	5
USFWS-33	Parker River Tidal Restoration Project	5

Project No	Project Name	RECONS Profile No
USFWS-34	Aquatic connectivity and flood resilience in Virginia: Replacing the Quantico Creek culvert in Dumfries	5
USFWS-51	Aquatic connectivity and flood resilience: Pond Lily Dam removal, West River, New Haven, Connecticut	5
USFWS-53	Aquatic connectivity and flood resilience: Hyde Pond Dam removal, Whitford Brook, Mystic, Connecticut	5
USFWS-68	Aquatic connectivity and flood resilience: Flock Process Dam removal, Norwalk River, Norwalk, Connecticut	5
USFWS-79	Aquatic connectivity and flood resilience: Norton Mill Dam removal, Jeremy River, Colchester, Connecticut	5
USFWS-89	Aquatic connectivity and flood resilience in Maryland: Removing the Centreville Dam in Centreville and the Bloede Dam in Catonsville	5
USFWS-94	Aquatic connectivity and flood resilience in New Jersey: Removing the Hughsville Dam in Pohatcong and restoring the Wreck Pond inlet and dune in Sea Girt and Spring Lake	5
41991	Increasing Seven Mile Island's beach resiliency, New Jersey	1
NPS-1A	Mitigate impacts from artificial groin to Jacob Riis Beach to restore habitats and recreation resources	1
USFWS-6	Increase resilience of beach habitat at Pierce's Point, Reed's Beach, and Moore's Beach, New Jersey	1
42956	Strengthening Coney Island's resiliency through green streets, New York	1
BOEM-M13AC00012	Ecological function and recovery of biological communities within dredged ridge-swale habitats and in the South-Atlantic bight	4
