- USDA Natural Resources Conservation Service
- Cargill
- Sysco
- Burger King
- Walmart Foundation
- U.S. Fish and Wildlife Service

ABOUT NFWF

The National Fish and Wildlife Foundation (NFWF) works with partners to foster sustainable and impactful conservation solutions so that people and nature thrive together. Chartered by Congress in 1984, NFWF has grown to become the nation's largest conservation foundation. Since its founding, NFWF has funded more than 23,900 projects that have generated a total conservation impact of \$12 billion.

Pronghorn

BACKGROUND

The Southern Great Plains host a unique set of wildlife species that are specifically adapted to this grassland ecosystem. Many species such as the monarch butterfly and songbirds migrate to and from the region to complete their life cycles. Pronghorn, swift fox, prairie chicken, bobwhite quail and other year-round residents live alongside human residents who are engaged in the ranching of livestock, primarily beef cattle.

The Southern Plains Grassland Program seeks to work closely with nonprofit organizations, government partners and the ranching community to bring important financial and technical resources to address the health and resilience of the grasslands of the Southern Great Plains. These actions will increase the vitality of this often-overlooked ecosystem, providing benefits to wildlife and to rural, ranching-based communities. In addition, these actions increase the ability of grasslands to store carbon, providing key benefits to much larger efforts to address climate change.

Program footprint with projects

(continued)

Lesser prairie chicken

The grants were awarded through the Southern Plains Grasslands Program with individual contributions provided by the USDA's Natural Resources Conservation Service, the U.S. Fish and Wildlife Service, Burger King, Cargill and Sysco with additional support from Walmart Foundation.

Since 2022, the program has awarded 43 grants to improve grassland health, support biodiversity and increase carbon sequestration. In total, more than \$16.6 million in grant funding was awarded, which was leveraged by nearly \$19.7 million in matching contributions from the grantees, providing a total conservation impact of nearly \$36.3 million.

GOALS AND OBJECTIVES

This program addresses the following priority strategies:

- Improve grassland health and resilience through improved grazing practices
- Control invasive species that reduce available forage for livestock and habitat for wildlife
- Restore formerly converted lands back to grassland
- Protect existing high-quality grassland parcels
- Invest in community-level grassland collaborative conservation efforts

- Explore innovations in conservation, including:
 - Grass banks and other community cooperative grazing arrangements
 - Innovations in fencing, water delivery and restoration

CONSERVATION IMPACT

The 43 grants supported through this program will contribute to the goals of the Southern Plains Grassland Program by:

- Improving grazing management on 1,189,765 acres of private, public and Tribal working lands to improve habitat for wildlife, increase climate resilience and support ranchers' bottom lines
- Restoring 676,756 acres of upland and grassland habitat on private, public and Tribal working lands
- Removing 37,818 acres of invasive eastern red cedar trees to restore healthy grassland habitats
- Removing or improving 157 miles of fencing to wildlife-friendly specifications
- Increasing regional capacity through funding of 54 Full Time Equivalent (FTE) positions
